

SPEEDSCAN'S HOSTED STATEMENT SERVICE NOW AVAILABLE WITH MY VIEWPOINT INTEGRATION

SYDNEY, AUSTRALIA - 5 November 2009: Speedscan is pleased to announce the newest version of SpeedVIEW Online, including a powerful new direct interface with Ultradata's My Viewpoint Internet Banking. The approved interface allows outsourced, hosted statement presentment without the need for additional user authentication.

The SpeedVIEW solution complies with the new Mutual Banking Code of Practice, and will allow Credit Unions and Mutual Societies to offer their members the option to receive statements electronically. This reduces costs of printing and mailing and lowers the environmental impact of customer communication without reducing its impact.

Speedscan's CEO Mark Josman says "the new version of SpeedVIEW Online means customers can now directly connect to their statements from within their internet banking application. SpeedVIEW Online is offered as service using our world class hosting infrastructure to allow institutions to securely store and present statements with no internal technology footprint and minimal up-front costs. We will be offering the service both directly and through our strategic partners

ABOUT SPEEDSCAN

Speedscan combines experience, leading edge technologies and robust processing services to deliver world class outsourcing solutions for document intensive business processes.

Our Document Process Outsourcing (DPO) solutions are delivered from locations across Australia, New Zealand and the Philippines, driving efficiency, productivity and profitability for more than 500 companies and managing more than one billion pages.

Our experience across the region is derived from over 10 years of proven success in creating powerful and effective solutions for business.
